Siddam Anjaiah

React Frontend Developer | Junior Full Stack (React + Node.js)

Mancherial, Telangana | Open to relocate: Hyderabad, Bengaluru, Chennai | 9390098364 | anjisiddam01@gmail.com
LinkedIn | GitHub | Portfolio

SUMMARY

Entry-level React developer who has built and deployed four REST API-driven applications, including ServiceNest, a full-stack service marketplace with a React frontend, Node.js/Express API, SQLite database, JWT authentication and Razorpay payments. Strong in React Hooks, Context API, protected routing, responsive design and accessible, test-ready markup (React Testing Library). Seeking a Junior React Developer, Frontend Developer or Junior Full Stack role.

TECHNICAL SKILLS

Frontend: React (Hooks, Context API, class components, lifecycle methods), React Router v5/v6, JavaScript (ES6+), HTML5, CSS3, Styled Components, Bootstrap, Flexbox, responsive design, light/dark theming, Vite
Backend and Databases: Node.js, Express.js, REST APIs, JWT, bcrypt, SQLite, MySQL, Razorpay integration
Testing and Accessibility: React Testing Library, semantic HTML, alt text, test IDs
Tools and Deployment: Git, GitHub, GitHub Actions (CI), GitHub Pages, Render, Surge, VS Code, npm
Libraries: react-slick, react-player, reactjs-popup, react-icons, react-loader-spinner, date-fns, js-cookie
Also: Python

PROJECTS

ServiceNest - Full-Stack Service Marketplace

React, Vite, Node.js, Express.js, SQLite, JWT, bcrypt, Razorpay, GitHub Actions | *Live demo* | *Code: GitHub*

- Built a marketplace with separate customer and provider roles, role-protected dashboards, service listings, and catalogue search, category filtering and sorting, backed by 15+ REST endpoints.
- Secured authentication with bcrypt hashing, signed JWTs stored as hashes so they can be revoked, input validation, and clear 400/401/409/500 errors; the frontend restores sessions on refresh and logs out on expired credentials.
- Designed the booking flow with idempotent creation (Idempotency-Key header), role-isolated booking history and participant-only chat that auto-refreshes.
- Integrated Razorpay Checkout with signed payment verification, webhook signature checks and duplicate-event protection; set up Render deployment and GitHub Pages CI.

Book Hub - Book Discovery App

React, React Router, react-slick, js-cookie, REST APIs | *Live demo* | *Code: GitHub*

- Built a 5-route responsive app with a reusable ProtectedRoute that gates pages on a cookie-stored JWT; integrated 4 REST endpoints with fetch and async/await.
- Combined bookshelf filtering and title search into a single API request, using useCallback and useEffect to avoid redundant renders and fetches.
- Handled loading, failure (Try Again) and empty states on every view; fixed failing React Testing Library tests by correcting semantic elements, alt text, test IDs and loader timing.

Jobby App - Job Search App

React, React Router, js-cookie, REST APIs | *Live demo* | *Code: GitHub*

- Built a responsive job search app with JWT login, two-way route protection and 4 REST APIs (Login, Profile, Jobs, Job Details) with loader, failure, retry and no-results states.
- Merged keyword search, multiple employment types and minimum salary into one query string for a single API request.
- Created a Job Details page with salary, skills, company info and similar jobs; met data-testid and alt-text requirements.

Nxt Watch - Video Streaming App

React, Styled Components, Context API, react-player, date-fns, REST APIs | *Live demo* | *Code: GitHub*

- Used Context API to share theme, saved videos and like/dislike state across routes; implemented light and dark themes with Styled Components.

- Built JWT login, protected routes and Home (search), Trending, Gaming and Video Details pages with consistent loader, failure and retry handling.
- Added react-player playback, mutually exclusive Like/Dislike, a Saved Videos page, a logout confirmation popup and relative dates; fully responsive.

Twitter Clone - Backend REST API

Node.js, Express.js, SQLite, JWT, bcrypt | Code: GitHub

- Built 11 REST APIs (register, login, feed, follow, likes, replies, create/delete tweet) with bcrypt hashing and input validation.
- Wrote JWT middleware (401 on invalid tokens), access control for followed-user feeds and own-tweet deletion, and SQL joins and aggregates across 5 tables.

EDUCATION

- **B.Com (Computer Applications)**, Vivekavardhini Degree College, Mancherial | 2021-2024 | CGPA 6.23
- **Intermediate (CEC)**, TS Model School and Junior College, Mancherial | 2021
