Siddam Anjaiah

React Frontend Developer
Phone: 9390098364 | Email: anjisiddam01@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

React frontend developer who has built and deployed four REST API driven applications: three single page apps (Book Hub, Jobby App, Nxt Watch) and ServiceNest, a full stack service marketplace with a React frontend, Node.js and Express API, SQLite database, JWT authentication and Razorpay payments. Also built a Node.js and Express backend with 11 REST APIs. Skilled in JWT authentication, protected routing, React Hooks, Context API, responsive design, light and dark theming, and semantic, accessible markup that meets React Testing Library requirements. Seeking a React Developer or Frontend Developer role.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), HTML5, CSS3, Python
- **Frontend:** React (Hooks, Context API, class components, lifecycle methods), React Router (v5, v6), Vite, Styled Components, Bootstrap, Flexbox, Media Queries, Responsive Design, Light and Dark Theming
- **Libraries:** react-slick, react-player, reactjs-popup, react-icons, react-loader-spinner, date-fns, js-cookie
- **Backend and Databases:** Node.js, Express.js, REST APIs, JWT, bcrypt, Razorpay integration, SQLite, MySQL
- **Testing and Tools:** React Testing Library, Semantic HTML, Accessibility (alt text, test IDs), Git, GitHub, GitHub Actions, GitHub Pages, Render, Surge, VS Code, npm

PROJECTS

ServiceNest: Full Stack Service Marketplace with Role-Based Accounts and Payments
Tech: React, Vite, Node.js, Express.js, SQLite, JWT, bcrypt, Razorpay, GitHub Actions
Live demo: anji0522.github.io/ServiceNest | **Code:** GitHub

- Built a React and Express marketplace with separate customer and provider roles, role-protected dashboards, provider profiles and service listings, catalogue search, category filtering and sorting, backed by a SQLite database with 15+ REST endpoints.
- Implemented secure authentication: bcrypt password hashing (with automatic upgrade of legacy scrypt hashes), signed HS256 JWTs stored as hashes so they can be revoked, email and international phone validation, duplicate prevention, and clear 400, 401, 409 and 500 errors. Frontend restores sessions on refresh, syncs across tabs and logs out on expired credentials.
- Designed the booking flow with idempotent creation (Idempotency-Key header), itemized hourly totals, role-isolated booking history and persistent participant-only chat that auto-refreshes. Integrated cash-after-service and Razorpay Checkout with signed payment verification, webhook signature checks and duplicate-event protection; configured Render deployment and GitHub Pages CI.

Book Hub: Book Discovery App with Cookie-Based JWT Authentication
Tech: React, React Router, react-slick, react-icons, js-cookie, REST APIs
Live demo: https://anji0522.github.io/bookhub/ | **Code:** GitHub

- Built a 5-route responsive app with a reusable ProtectedRoute component that gates pages on a JWT stored in cookies; integrated 4 REST endpoints using fetch and async/await.
- Implemented bookshelf filtering and title search combined into a single API request, using useCallback and useEffect to avoid redundant renders and fetches.
- Handled loading, failure (Try Again) and empty states on every view; built a responsive react-slick carousel and fixed failing tests by correcting semantic elements, alt text, test IDs and loader timing.

Jobby App: Job Search App with Combined Filtering
Tech: React, React Router, js-cookie, react-icons, REST APIs
Live demo: https://anji0522.github.io/JobbyApp/ | **Code:** GitHub

- Built a responsive job search app with JWT login, inline error messages and two-way route protection; integrated 4 REST APIs (Login, Profile, Jobs, Job Details) with loader, failure, Retry and no-results states.
- Designed combined filters (keyword search, multiple employment types, minimum salary) merged into a single query string for one API request.
- Created a Job Details page with description, salary, skills, company information and similar jobs; met data-testid and alt text requirements; deployed to GitHub Pages.

Nxt Watch: Video Streaming App with Light and Dark Theming
Tech: React, React Router, Styled Components, Context API, react-player, reactjs-popup, date-fns, REST APIs
Live demo: https://nxtwatch-anjisiddam01.surge.sh/ | **Code:** GitHub

- Used Context API to share theme, saved videos and like and dislike state across routes; implemented light and dark themes with Styled Components.
- Built JWT login, protected routes and Home (with search), Trending, Gaming and Video Details pages with consistent loader, failure and Retry handling.
- Added react-player playback, mutually exclusive Like and Dislike, Save and Saved toggle with a Saved Videos page, a logout confirmation popup and date-fns relative dates; fully responsive; deployed on Surge.

Twitter Clone: Backend REST API
Tech: Node.js, Express.js, SQLite, JWT, bcrypt
Code: GitHub

- Designed and built 11 REST APIs (register, login, feed, follow, likes, replies, create and delete tweet) with bcrypt password hashing and input validation.
- Wrote JWT middleware returning 401 for invalid tokens, access control for followed-user feeds and own-tweet deletion, and SQL joins and aggregates across 5 tables.

EDUCATION

- B.Com (Computer Applications), Vivekavardhini Degree College, Mancherial, 2021 to 2024, CGPA 6.63
- Intermediate (CEC), TS Model School and Junior College, Mancherial, 2021

CERTIFICATIONS

- **NxtWave Certifications:** Programming Foundations | Static Website (HTML, CSS) | Responsive Website (Bootstrap, Flexbox) | JavaScript Essentials | React JS | Introduction to Databases (MySQL)
